

Cloud-Based Email Protection

WHY – Email is the #1 attack vector for businesses and is the most common method cybercriminals use to distribute ransomware and other email-borne cyberattacks. This reality forces busy IT teams to battle a constant stream of attacks with a complex web of cybersecurity solutions.

SOLUTION – Vade Cloud is an AI-based email security solution that blocks phishing, ransomware/malware, and spear phishing attacks. Migrating email messages to Vade's cloud-based platform is simple and provides instant protection against advanced and zero-day attacks.

- ✓ 24/7 Email Protection
- ✓ SLA 99.00% – GTR 2h

AI-based email security

Focusing on both content and context, Vade's filter uses machine learning and artificial intelligence (AI) to provide predictive protection against both known and unknown email threats right from the very first attack. It is designed to provide significant improvements to security and user experience, offering protection against phishing, ransomware, malware, and spear phishing, while also providing useful non-priority email filtering tools.

Complete Email Protection

Defends against all types of email-based attacks, including malware, phishing, spear phishing, and domain hijacking. Detects and classifies non-priority emails, with an automatic one-click unsubscribe feature.

Continuous Protection

The filter is updated every few minutes for maximum security, and regular automatic updates continuously provide you with new functions and the best protection.

Incoming & Outgoing Email Filtering

Junk emails are blocked to help you keep your IP addresses clean, while the centralized dashboard makes it easy for you to identify Botnet infections.

High Availability and Guaranteed Continuity of Service

Your data is automatically saved and protected in the cloud. Vade Cloud's service level agreement guarantees 24/7 coverage, 99.99% availability, a maximum one-hour support response, and seven days SMTP retention in case your network goes down.

State-of-the-Art Predictive Filtering

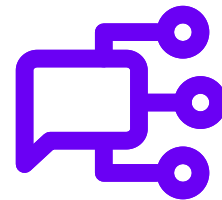

Multilayered analysis and filtering of communication protocols, email content, and attachments. Detects and blocks attacks before they spread, including both known and unknown malware and polymorphic attacks.

Premium Support

24/7 telephone, web, and email support for all customers.

Easy to use and manage, built to scale with your business

- ✓ **Simple implementation for immediate protection** – The solution comes preconfigured, protecting organizations against all email-borne threats.
- ✓ **Increase employee productivity** – Graymail filtering improves user productivity by classifying non-priority emails into separate inboxes using their personal quarantine. If necessary, they can move messages to the main inbox.
- ✓ **Reduce administration time** – The powerful, intuitive management console simplifies IT administration. You no longer have to plan backups or set time aside for updates—it all occurs automatically in the cloud.
- ✓ **Self-learning mode** – New user inboxes are automatically added and configured the first time they receive a legitimate email message.
- ✓ **Real-time attack reporting** – Get a real-time overview of all attack attempts against your organization as well as valid, suspect, and rejected messages.
- ✓ **A la carte cloud service** – Vade Cloud is billed annually based on the number of protected mailboxes, providing you with the option to increase your capacity and adapt the solution to your changing needs.
- ✓ **Decrease email infrastructure costs** – Everything is managed in the cloud—no infrastructure or maintenance costs.

AI-powered email security: Block attacks at the first attempt Vade

Cloud analyzes emails, webpages, and attachments with behavioral analysis that identifies sophisticated ransomware/malware, phishing, and spear phishing emails. Vade Cloud's filtering technologies are continually updated and enhanced by threat intelligence generated by Vade's 1 billion protected mailboxes.

Supported platforms

Vade Cloud is compatible with Exchange, Microsoft 365, Google Workspace, Zimbra, and all other messaging platforms.

About Vade

Vade is a global cybersecurity company specializing in the development of threat detection and response technology with artificial intelligence. Vade's products and solutions protect consumers, businesses, and organizations from email-borne cyberattacks, including malware/ransomware, spear phishing/business email compromise, and phishing. Founded in 2009, Vade protects more than 1 billion corporate and consumer mailboxes and serves the ISP, SMB, and MSP markets with award-winning products and solutions that help increase cybersecurity and maximize IT efficiency.
